2. Data section

To search a good place near colleges/university:

I used the data of location and geospatial data of college and university in <https://data.boston.gov/dataset> . I've cleaned the data before use it

2. Then I used Forsquare API to get the most common venues nearby the college and university of Boston and view the density of the coffee shop already opened

Metodology

First I download the list of the college and University of Boston from the site <https://data.boston.gov/dataset>.

I search where are most college/university

Metodology

I viewed it the heatmap to understand the concentration

Conclusion

We see from heatmap that the coffees is not only for students but also for business peoples. We should be far from red zones because of the competitors but near the interesting places. For example I've decided to explore the venues near "Empire Beauty School-Boston«.A good place is probably near the college and the parks. The area is also full of theatre and so the coffee is also good place after a performance
